

Flooring & Concrete Moisture Prevention Systems

Admixtures – Concrete Additives to Eliminate Moisture and Vapor

- **Concure Admix** – Since 1991 Concure Admixture has been a more efficient, cost-effective way to eliminate moisture in concrete, eliminating the need for a plastic vapor barrier.
- **Genesis** – New and advanced silicate free version of Concure Admixture, Genesis offers the same moisture mitigation solution plus the highest degree of impermeability to stop moisture, vapor and protect concrete for extending life cycle.
- **InCore** - InCore moisture proofing admixture is designed for sidewalks, garages, basements or where floor covering is desired. InCore internally seals the concrete.

Moisture Vapor Emissions Eliminators or MVE²

Concure Group's Moisture Vapor Emissions Eliminators, or MVE², includes a line of topical products used to reduce/eliminate moisture and vapor in existing concrete.

MVE² is available in –

- **100% Solids Epoxy** - Available in cure rates ranging from 45 min to 16 hrs. Can also be used to repair/patch concrete. VOC compliant, meets ASTM F2170 requirements
- **Water Based Epoxy** - Can be applied over green or damp concrete. Air dries as it cures and an effective curing agent. Low odor and VOC compliant.
- **Concrete Slurry** - 2 step Penetrating sealer that seals micro-cracks and stops moisture below the surface. Cement-based slurry application offers double protection. Compatible with cement patches, adhesives and floor coverings. No epoxy odor, VOC compliant.
- **Vapor Barrier PLUS** – Non-silicate penetrating sealer. Simple, easy to use spray down application compatible with all floor coverings. Ideal for slabs without cracks.

Sealers, Primers and Cleaners

- **DermaFier** – A lithium based colloidal penetrating densifier that is used in the polish concrete process as well as enhancing concrete surfaces.
- **DermaShield** – A water based, pre-mixed liquid designed to penetrate deep into the concrete slab to stop hydrostatic pressure and reduce vapor permeability to protect surface applied coatings and adhesives from the effects of capillary moisture and vapor pressure.
- **DermaGuard** – 2 component polished concrete system used to achieve a 3d like finish on concrete.
- **DermaSeal** – Spray on masonry sealer for weatherproofing and water resistance.
